

澳門理工大學
Universidade Politécnica de Macau
Macao Polytechnic University

Faculty of Applied Sciences

Academic Year: 2026/2027 Semester: 1

Homework 2

Programme:	Bachelor of Science in Computing / Bachelor of Science in Artificial Intelligence
Learning Module:	English III
Class Code:	MENG2111 – 21A/214/215/219
Date Due:	20 November
Name of Instructor:	Dr. Raymond Si Tou

Name of Student: _____

Student Number: _____

A mark of zero will be given if you copy someone else's work, or if you let someone copy your work.
Every assignment/project submission must be attached with a signed 'Declaration of Use of Generative AI'

Total Score: _____ Signature of Instructor: _____

For Examiner's use only			
Question No.	**Page No.**	**Assigned Marks**	**Marks Obtained**
1-10	**3-4**	**10**	
11-15	**5**	**5**	
16-20	**6**	**5**	
21-26	**7**	**15**	
27-32	**8**	**15**	
33-40	**9**	**20**	
41-48	**10**	**20**	
49-51	**13**	**10**	
Total			

Section A: Vocabulary – Multiple Choice

Choose the ONE best answer for each multiple-choice question and write the letter label of your choice in the answer blank. (Total: 10 marks @ 1 marks per correct answer)

1. The scientist's research provided _____ measurements that confirmed her hypothesis.

A. accurate

B. controversial

C. conventional

D. limitless

Answer: _____

2. The new software allows users to _____ their profiles with custom features.

A. adopt

B. install

C. personalise

D. access

Answer: _____

3. The study's _____ were published in a leading scientific journal.

A. components

B. implications

C. opinions

D. outcomes

Answer:_____

4. The two theories were _____ in their approach to explaining human behaviour.

A. renowned

B. transformed

C. analogous

D. conventional

Answer: _____

5. The researcher faced a moral _____ when deciding how to use the data.

A. surveillance

B. dilemma

C. modification

D. speculation

Answer:_____

6. The _____ from the silk moths were analysed in the laboratory.

A. threads

B. dyes

C. fibres

D. yarns

Answer: _____

7. The social context of the advertisement was carefully examined by the _____.

A. historian

B. environment

C. boundaries

D. structures

Answer: _____

8. The exhibition was _____; visitors could spend hours exploring it.

A. fleeting

B. frustrating

C. fascinating

D. ephemeral

Answer:_____

9. The old newspaper contained _____ that had faded over the years.

A. advertisements

B. boundaries

C. clues

D. techniques

Answer: _____

10. The advertisement used _____ language to convince consumers to buy the product.

A. repetitive

B. persuasive

C. frustrating

D. revealing

Answer: _____

Section B: Vocabulary – Word Completion

Complete the words below using the given definitions. (Total: 5 marks @ 1 mark per correct answer)

11. col_____ive (adj) of or shared by every member of a group of people

Ans :

12. tec_____ue (n)a way of doing an activity that needs skill

Ans:

13. unpre_____ted (adj) never having happened or existed in the past

Ans:

14. socio_____st (n) someone who studies or is an expert in sociology

Ans:

15. con_____sial (adj) causing disagreement or discussion

Ans:

Section C: Vocabulary – Sentence Completion

Complete each statement with the correct word from the table below. Answers may be used only once. (Total: 5 marks @ 1 mark per correct answer)

genome	**context**	**reinforce**	**copying**	**rate**
application	**implication**	**featured**	**quandaries**	**dissolve**

16. The chemical solution was used to _____ the protein strands for analysis.
Answer:

17. The social _____ of the advertisement was carefully examined by the researcher.
Answer:

18. The _____ of the organism was sequenced by the research team.
Answer:

19. The exhibition _____ works from both established and emerging artists.
Answer:

20. The student's answer was a direct _____ of the textbook.
Answer:

Section D: Grammar – Forming Adjectives, Nouns and Gerunds

For each indicated word, complete each sentence using the correct related part of speech. (Total: 15 marks @ 2.5 marks per correct answer)

21. (Enforce) The _____ of tighter import controls on semiconductors will begin on January1.

Ans:

22. (Bribe) Tommy thought he could avoid a speeding ticket by _____ the police officer with money.

Ans:

23. (Category) One way to _____ videos is with "tags", which are simply words that apply to the content.

Ans:

24. (Occasion) Even hard-working students _____ fail, though not often.

Ans:

25. (Expect) Excellent! The quality of this marketing plan surpasses my_____.

Ans:

26. (Triumph) After a long break, Amanda _____ return with a hit movie.

Ans:

Section E: Grammar – Order of Adjectives

Write and complete each sentence, placing the indicated adjectives in the correct order. <u>Remember to use proper grammar and punctuation.</u> (Total: 15 marks @ 2.5 marks per statement)

27. (refreshing, relaxing, fun) A summertime swim is _____.

Ans:

28. (volatile, passionate) Amy and Sam have a _____ relationship that no one seems to understand.

Ans:

29. (lecture, large, circular) Every seat in the _____ hall was occupied.

Ans:

30. (antique, lots of, boring) My grandmother has _____ books in her library.

Ans:

31. (Italian, black, hot) Milly always drinks a cup of _____ coffee before leaving for the office.

Ans:

32. (wool, old, blue) The baby is very attached to that _____ blanket.

Ans:

Section F: Grammar – Active and Passive Sentences

Rewrite the following sentences from active to passive voice. (Total: 20 marks @ 2.5 marks per statement)

33. I broke your motorcycle.

Ans:

34. This month, our company awarded Joe the "Employee of the Month" prize.

Ans:

35. A company-wide email delivered the message to all employees.

Ans:

36. They sent the documents to the wrong address.

Ans:

37. Researchers will publish their results in the next issue of the marketing journal.

Ans:

38. Many students had made the same errors.

Ans:

39. My wife is baking breads for the kids!

Ans:

40. My neighbor will look after my rabbit while I am away.

Ans:

Section G: Grammar – Reporting People's Words (Indirect Speech)

Rewrite the following sentences from direct to reported (indirect) speech using the indicated reporting verb. <u>Be careful of tenses and punctuation.</u> (Total: 20 marks @ 2.5 marks per statement)

41. (Think) Kim: "I can probably sell my painting for $25,000."

Ans:

42. (Ask) Mother: "Where do you want to eat tonight?"

Ans:

43. (Say) Leo: "My brother works for a Korean company."

Ans:

44. (Whisper) Jimmy: "I do not want to discuss it at this moment."

Ans:

45. (Explain) Bill: "I do not want to shock people with my theories."

Ans:

46. (Tell) Gordon: ""Make sure you arrive at six!""

Ans:

47. (Ask) Waiter: "Do you prefer a table near the window?"

Ans:

48. (Deny) John: "I am not happy at work."

Ans: John denied saying that he was not happy at work.

Section H: Reading Comprehension
Read the passages below and answer the following questions

Remnants of the past

In a museum laboratory, Irene Good is studying pieces of silk from long-lost cloth found at archaeological sites in western Europe and central and south Asia. Good immerses the threads in a solution to tease apart the strands of protein, then uses several methods of biochemical analysis to examine the proteins' amino acids. The amino acids present and the order they are in vary in different species of silk moths and therefore provide clues as to where the silk was made' What I love most is being able, not just to alter what's known, but to improve access to the past based on very tiny pieces of evidence. Until recently, it was assumed that all [ancient] silk was from China,' says Good, a specialist in fibre analysis and ancient-textile production and trade. 'Scholars held that any silk dating from 2400 to 700 B.C. was carried afar on trade routes from China. But our work is now calling that assumption into question.' Her findings indicate that the ancient silk actually came from species of wild moths native to western Europe and Asia. 'Now it looks like some of the silk industry outside China was earlier than thought and more widespread,' Good says. Today, Good and other researchers are applying high-tech methods of chemical analysis to ancient textiles and fibres to glean unique clues about past civilisations. The results are shedding light on many aspects of daily life among early peoples. Much of the insight is coming from minuscule samples of textiles, which archaeologists categorise as 'fibre perishables'. Until recently, these remains were usually overlooked because they were frayed. Discoloured or too fragile to withstand the rigours of
Analysis.

'Because textiles are organic, they're subject to biological deterioration from air, water, minerals insects and fungi. All kinds of things attack organic material and use it as their dinner,' says Joseph Lambert of Northwestern University in Illinois. Most of the past cloth and other fibre goods degrade over time and eventually disappear. However, according to Lambert, in some cases ancient textiles survived well because they'd spent centuries in arid, freezing or low-oxygen environments, such as well-sealed tombs. Scientific interest in ancient textiles and other fibre objects is burgeoning, and chemical analysis and powerful microscopy can reveal remarkable characteristics of textiles: what plants and animals the fibres came from, how the yarns were made, what weaving techniques were employed and what dyes or pigments were used to colour them. Such information, combined with other evidence, enables researchers to infer the technological skills of ancient civilisations and the cultural importance of their textiles, notes Kathryn Jakes of Ohio State University in

Columbus. Among the fabric samples Jakes has analysed are carbonised scraps from ancient burial sites. Analyses have revealed decorative patterns indicating that at least some of the now-faded textiles had been coloured. 'The presence of colour reflects a significant level of technology, including knowledge of colourants in nature and of methods required to affix them to organic materials,' sesames. She and her colleagues have conducted experiments to find out what combinations of plants and minerals may have been used. Prehistoric people probably used plants like sumac as dyes, Jakes says, because caches of those seeds have been recovered from archaeological sites although the plants have no known dietary use. In one set of experiments, the researchers made dye baths from sumac berries combined with different mineral fixatives. When the researchers tested the baths on fibres from milkweed plants and rabbit hair, only one combination - sumac, bedstraw and potassium carbonate - produced a deep red that was colour-fast.

Short Answer Questions (Total 10 marks)
Based on the information in the passages, answer the following questions in complete sentences.

49. According to the text, what methods does Irene Good use to analyse ancient silk? (3 marks)

Answer:

50. What was the traditional scholarly assumption about ancient silk, and how has Good's research challenged it? (3 marks)

Answer:

51. Why have ancient textiles often been overlooked by archaeologists in the past? (4 marks)

Answer:
