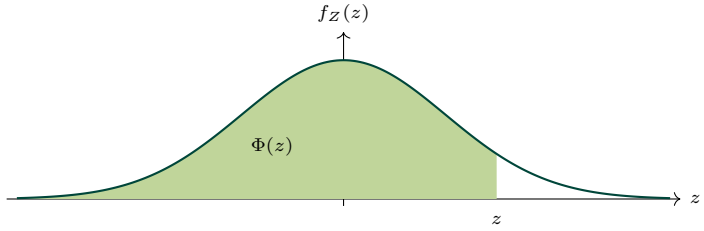
Standard Normal (Z) Distribution Table

How to Read This Table

Each cell gives the **cumulative probability** $\Phi(z) = P(Z \le z)$, the area under the standard normal curve to the *left* of z.

- Find the **row** using the ones and tenths digit of z (e.g., 1.9).
- Find the **column** using the hundredths digit of z (e.g., .06).
- The intersection is $\Phi(z)$.

Worked Example: $P(Z \le 1.96)$: row 1.9, column .06 $\Rightarrow \Phi(1.96) = 0.9750$.



z	.00	.01	.02	.03	.04	.05	.06	.07	.08	.09
0.0	.5000	.5040	.5080	.5120	.5160	.5199	.5239	.5279	.5319	.5359
0.1	.5398	.5438	.5478	.5517	.5557	.5596	.5636	.5675	.5714	.5753

Negative z: Use Symmetry

This table only lists $z \ge 0$. For negative z, use the symmetry of the normal curve about 0:

$$\Phi(-z) = 1 - \Phi(z)$$

Example: $P(Z \le -1.96) = 1 - \Phi(1.96) = 1 - 0.9750 = 0.0250$. **Also useful:** $P(Z > z) = 1 - \Phi(z)$, $P(a < Z < b) = \Phi(b) - \Phi(a)$.

Quick Reference: Common Critical Values

Right-tail area	z
0.10	1.282
0.05	1.645
0.025	1.960
0.01	2.326
0.005	2.576
